from diagnosis to cure

The Ecosystem of Digitally Enabled Diabetes Care

Using the **power of data** and **digital connectivity** for

✓ Easier
self-management

✓ Greater
care support

✓ Better
outcomes

✓ Higher
quality of life

Connected glucose monitoring systems

regularly track, predict and alert to changes in glucose levels
Smart insulin delivery systems

calculate and track dosage data to automatically inject insulin or prompt action via notifications

122

Algorithms

(within devices or stand-alone) transform data into meaningful information

Medical apps

(integrated or stand-alone) display health trends, coach and educate

e-Prescriptions

facilitate the process of maintaining diabetes supplies, improving convenience and adherence

24/7

Telehealth solutions

allow for 24/7 remote monitoring, data-driven decision making, and easier interactions with doctors and carers

e-Health records

compile data from digital devices and services to enable more personalised care and better population level research
